Testamonials

" I really appreciate the willingness to work with James and myself when we were at your shop. You have a great thing going there. Tommy and your other staff took pride in their work and working with us. It's not often that I have the opportunity to enjoy a day at the fab shop. I really appreciate the respect and willingness to work with the inspector that you all showed. The homemade lunch was great too. Your shop has a pride of craftsmanship that I don't see much anymore. I think that is cool. I look forward to working with your organization again." - John Cook with Anderson Engineering.

Detailing

Tekla Software

We utilize Tekla as our 3D detailing software. Tekla is a leader in Structural Steel Detailing. With Tekla's free BIM viewer, it makes it an excellent source for project review and also a great aid in the construction of the building

Detailing

Our detailing abilities consist of 3D detailing, complete with drawings, Connection design and Engineering. We have a team of in-house Detailers that utilize multi-user models allowing us to have multiple men working on a single project thus improving drawing submittal time. Our detailing staff is led by over 20 years of experience in structural steel detailing.

Fabrication

Python

We purchased this machine new in 2007. This machine has been an exceptional addition to our overall quality and production line. Using files directly from the building's 3D model, it takes the human error out of manually drawing files. Also, using high definition plasma, the cut quality is second to none.

250×250

Burn Table

250×250

Our burn table was updated in 2014 with full CNC Hypertherm controls and a high definition plasma, allowing us to process plates up to 2-inch thick without sacrificing cut and hole quality. This machine also uses files directly from the building's 3D model to cut parts; taking out the human error of re-drawing files.

Press Brake

This 2009 Accupress is the "Cadillac" of press brakes. With a 6 axis fully CNC back-gauge, automatic bench camber, and servo feedback on each ram, a true and straight bend is guaranteed every time. The addition of the CNC bench followers, adds increased safety to the operator while bending large parts.

250×250

Band Saw

This HEM Saw is capable of cutting shapes 24W X 16T up to a 60 degree miter. With power in-feed and out-feed rollers and transfer chains for offloading material. This machine is where we primarily cut all of our hallow structural shapes such as Tubes and Pipes.

About Us

Humble Beginnings to Becoming Excellent!

We started out as a no-name startup in the fall of 1999 working out of a small 25x50 shop. No office and no real tools to our name. 2-years later we built a slightly larger shop at 50x100 and in the summer of 2001 we moved in. Today, we have over 48,000 sqft of shop; we have provided the structural steel for over 400 projects, to 29 different states. We have developed a name that the construction industry knows and trust. Thanks to our outstanding team who will work tirelessly to maintain quality standards and ensure schedules are met. We are truly proud of the steel fabricator we have become. If you have worked with us before, you've seen the commitment from Tina during the estimating to give fair and solid pricing. As well as the ongoing efforts from Josh the Project Manager to clearly communicate with your team to ensure the steel construction goes through on time and without issues. If you are one of our suppliers or subs, you know that Mark always pays on-time or even more often pays early. The mentality of doing the very best job possible, runs through all of our departments.
